Art Unit: 1614

Claims 1-50 are presented for examination.

Applicant's information disclosure statement filed August 24, 1999 has been received and entered.

Claim Rejections - 35 U.S.C. § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 1-50 are rejected under 35 U.S.C. 103(a) as being unpatentable over Eisen (A) and Ramos et al. (R).

Eisen teaches the use of a combination containing steroids and antifungal agents to treat inflammatory disorders, such as mucositis. (See the abstract) Note particularly column 4, lines 41-49 teaches various antifungal agents which includes the applicant's preferred antifungal agents used to treat mucositis.

Art Unit: 1614

Ramos et al. teach an oral administration of short-chain fatty acids used to reduce intestinal mucositis. Note the one of the short-chain fatty acids used in propionic acid, another one of the applicant's preferred antifungal agent.

The instant invention differs from the cited references in that the cited references do not teach the specific amounts of the antifungal agents are used to treat intestinal mucositis. However, to determine an amount having optimum effect against intestinal mucositis is well within the level of one having ordinary skill in the art, and the skilled artisan would have been motivated to determine optimum amounts to get the maximum effect of the claimed compounds.

Claims 1-50 are not allowed.

The remaining reference listed on the enclosed PTO-892 is cited to show the state of the art.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Examiner K. Weddington whose telephone number is (703) 308-1235.
